

OVERVIEW

Summary

- Several years of industry experience as a Data Engineer specializing in Business Intelligence, Analytics, and Agile process/Scrum methodology.
- BS in Comp Science (2003) & MBA from Univ. of Connecticut (2009).
- Currently working as a Data Engineer in Microsoft, handling high impact projects with aggressive deadlines.
- Previously worked for Yahoo!, Bank of America & iGATE in the similar capacity.

Technical Skills

- **Data Warehouse:** Data Architecture, ETL, Dimensional Modeling, Data Governance
- **Big Data:** System design, Hive, Hadoop, Spark, Streaming Analytics, Data Integration
- **Business Intelligence:** Tableau, Cubes, Power BI, QlikView, QlikSense, Micro strategy
- **Computer Programming:** Oracle, PL/SQL, SQL, Unix shell scripting, Introductory knowledge of C/C++ and HTML/CSS/JavaScript, Python
- **Others tools:** Business Objects, Cognos, ALM tools like JIRA, MS Office/Visio/Project, Sharepoint
- **Software Architecture:** Cloud computing, REST & RESTful Web services, Microservices, n-Tier architecture, Unified Modeling Language (UML), Devops including CI/CD pipeline, Git/SCM repositories
- **Test Methodologies:** Test Driven Development, Unit & Integration testing, Regression testing, User Acceptance Testing
- **Project Management:** SDLC Methodology – Agile & Waterfall, Sprint planning, Managing Technical debt
- **Documentation:** Requirement collection & documentation, Use Case documentation, UI mockups/Wireframe diagrams

WORK EXPERIENCE

Microsoft, Principal Data Engineer

Sunnyvale CA | Jun 2019 – Current

- Worked on near real time datawarehouse using Cutting edge technologies in credit domain. Extensive experience on data transformation tools and big data technologies. Expert in building data analytics platforms from ground up using cutting edge big data technologies like pig, hive
- Involved in building a complex process to create xml data feed, encrypt and add a digital signature using openssl
- Architected/implemented reusable encryption framework
- Built data pipe link for fraud offline analysis of UK customers, saving ~10KUSD/day to start with
- Built a reusable framework to generate merchant settlement reports using big data eco system

Bank of America, Sr ETL Engineer

New York NY | Oct 2017 – June 2019

- Coordinate various enterprise efforts that affect business applications, with a focus on data that moves through the enterprise.
- Key member of Data Architecture & governance program & Participating in Core Banking Re-platform Program.
- Data Architecture and Design for Enterprise Transaction Data Store.
- Successful implementation of MongoDB (NoSQL/Document based) data environment in the Bank.
- Developed complex data pipelines for MongoDB documents for supporting Microservices architecture for new & modern enterprise Customer Relationship application.
- AWS Cloud Data Migration Strategy
- Build Enterprise Strategy for Test Data Management.
- Constantly monitor, refine and report on the performance of data management systems.
- Define Data Warehouse Standards and Best Practices.
- Linux and Python Scripting for batch data processing.

Yahoo! , Data Engineer - Revenue	New York NY Sep 2009 - Oct 2017
- Developed account insights & competitive trends for top advertisers through interaction with regional Directors, Account Managers & Sales Rep using historic data with the focus to increase firm's revenue - Analyzed all the advertising methods display & search ads and analyzed revenue generated by revenue models like cost per click, cost per visitor, cost per thousand impressions etc. - Interacted with Directors, Account Managers, and Sales Rep to get their estimates on the revenue by advertisers. Generated forecast report by region and by advertiser. - Prepared automated quarterly forecasting sales metrics for each of the Directors & Regional VP's. - Implemented dashboard to publish forecast & target revenue numbers on the weekly/monthly/yearly basis in Access DB & Cognos.	
iGATE Global Solutions , Sr. Software Engineer	Bangalore India Sep 2004 - Aug 2007
- Collected user requirements & designed tech specs to implement historical data load from DB2 source to UNIX flat files to staging area and finally to Enterprise DW of the warehouse system. - Developed Informatica mapping to extract/transform data from DB2 (UNIX flat files) to staging area and later to Enterprise Data Warehouse. - Created sessions & workflows to automate ETL operations. - Monitored workflows, performed data validation and maintained load status & session logs. - Performed Unit test in dev environment and worked closely with QA team for fixing issues.	

EDUCATIONAL BACKGROUND

MBA	University of Connecticut School of Business, Storrs CT	2009
	Major in Finance & Minor in Accounting.	
B.E.	Oriental Institute of Science & Technology, INDIA	2003
	Major in Computer Science & Engineering.
